- Tenzorsoft (Software enginer)   05.02.2026 – current

RELEVANT PROJECTS:

GREENSHOP

This flower e-commerce platform is built with TypeScript, React, and Ant Design. It allows users to explore flower details, place online orders, and authenticate via Google Login using React Auth Kit. The project uses TanStack Query for efficient server-state management and Redux Toolkit for client-side state. Users can also create and publish personal blogs within the platform.

https://greenshop.kadirov-js.uz

IT SHAHARCHA

Developed the frontend for the official "IT City" platform launched under the Presidential decree (May 15, 2024). Built a scalable UI using React.js, Redux Toolkit, and Tailwind CSS, ensuring full responsiveness and stable API integration.

JSONBEK

Built the "Jsonbek" platform as a full-stack project using Next.js. It serves as a developer-friendly fake API environment for frontend engineers, supporting fetching all data and retrieving single items by ID. The platform has already been tested by 300+ users.
